FROM: Tony Gallegos, Reclamation Engineer *aaA*

RE: Site Inspection, Hansen Stone Quarries, Wesco Project, S/013/001, Duchesne County, Utah

Date of Inspection: July 21, 1993
Time of Inspection: 1130 - 1210
Conditions: Overcast, windy
Participants: Dan Powell, representing Hansen Stone Quarries; Tony Gallegos, DOGM

Purpose of Inspection: To evaluate the current condition of the site.

The access road to the site is also used to access some private property further up the road. The quarry operations are visible from SR 191. There are currently three main quarry areas along a sandstone outcrop trending east-west. The quarries are excavations into an existing sandstone cliff which outcrops at this location.

A short spur road off of the main access road leads to the first and second quarry areas. This road is approximately 390 feet long and 10 feet wide. The cliff is approximately 8 to 10 feet high at this location. The disturbance at these quarry areas is approximately 210 feet long and 130 feet wide (including the disturbance above the cliff face).

The third quarry location is to the east of the first location. This third quarry site is accessed by another short spur road off the main access road. This spur road is approximately 0.1 mile long and 12 feet wide. The quarry area here is approximately 60 feet long and 15 feet wide.
